

ATP-metry values interpretation - Ultra-pure water -

Tap water (in LOG eq.bact./l):

Soft water (in LOG eq.bact/l):

Ultra-pure water (in LOG eq.bact./l):

We consider that when a measurement is:

- Below the warning threshold (**conformity**), the facility is under control,
- Between the warning threshold and the alarm threshold (**enhanced monitoring**), the facility does not present an immediate biohazard. A corrective action is recommended if 3 consecutive measurements are above the warning threshold,
- Above the alarm threshold (**corrective action**), the facility is not under control. A quick corrective action is recommended (control, cleaning, disinfection...).
