

## Measure the quantity of bacteria on your surfaces in less than 2 minutes

 **VALIDATE** and **VERIFY** your cleaning & disinfection procedures.

 **IMMEDIATE** results in equivalent bacteria per cm<sup>2</sup> easily understandable.

 **RELIABLE** because of the internal standardization. Avoid false negatives.

 **ACCURATE** with sampling of a defined surface.

 **COMPATIBLE** with most luminometers on the market.

## Manage biofouling of your surfaces

## They trust us

**David B. - Technician Niort Agglo**

« My job is to ensure that the regulations imposed on municipal pools are followed to protect the public health and welfare. Based on the recommendations of the ARS, we chose ATPmetry which gives almost instantaneous results of the microbial contamination of surfaces. Thus, we implemented a more efficient maintenance protocol of surfaces, therefore ensuring good quality of bathing water as well as the barefoot walking paths. »

**Monique Bignoneau - Safety and hygiene expert**

« Thank you to the GL Biocontrol's team for their commitment, listening and support! The equipment is reliable and easy-to-use. I use this test kit for my clients. I recommend it to anyone who needs to monitor their facility in terms of hygiene and who reports to authorities. »

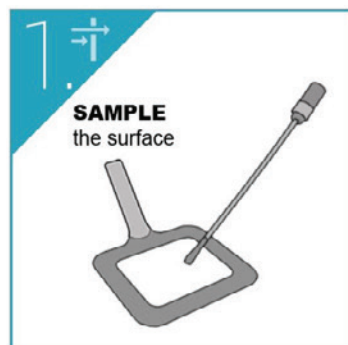

# What is DENDRIDIAG®?

It is a complete field kit designed to measure the quantity of bacteria on surfaces:

- Food industry,
- Swimming pools and thermal centers,
- Drinking water supply systems (water tower, reservoirs...),
- Cooling system pipes...

Get immediate and easily understandable results.

## A rapid and reliable test

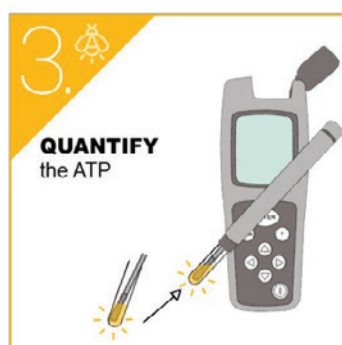

### A relevant analysis

- Delimited sampling
- Low detection limit
- High microbial recovery

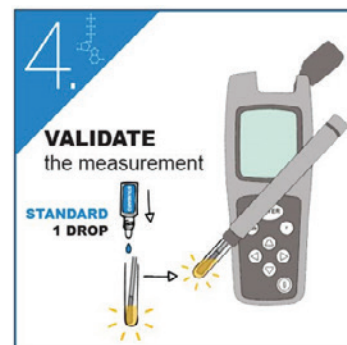

### Bacterial extraction

- Analysis of the whole sample
- High sensitivity

### Measure in 10 sec

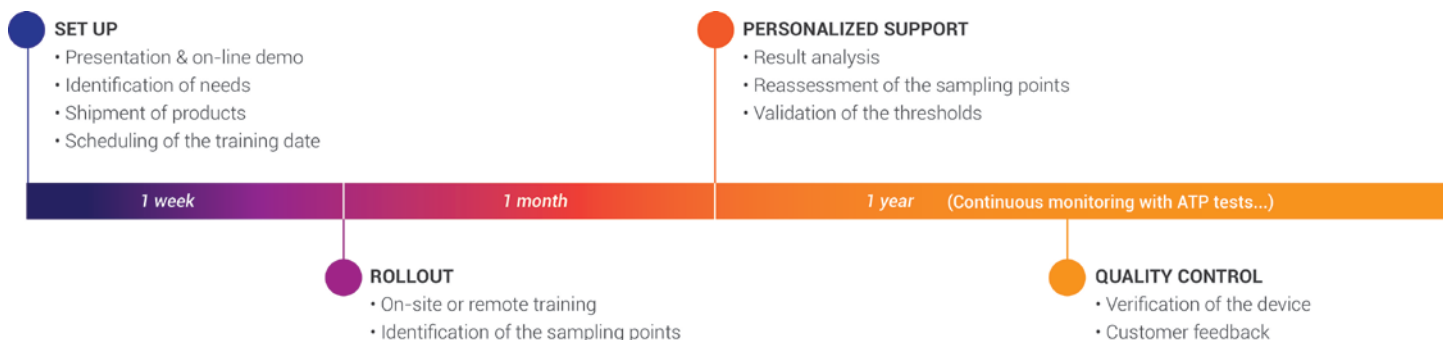

- Instantaneous analysis of your sample

### Test validation

- Quantitative results
- Consideration of environmental parameters
- Avoids false negatives

## Personalized support

## Kit content

### The reagents

- 50 test tubes LUMITUBE
- 2 dropper bottles EXTRACTANT
- 1 dropper bottles STANDARD

### The consumables

- 50 sample swabs
- 1 sampling template

### The measuring device

- 1 luminometer KIKKOMAN PD30
- 1 rack for microtubes
- 1 USB flash drive

## 4 easy ways to order
